

ParcelPilot Product Operations Guide

Status: CURRENT

Updated: 14 August 2026

1. Plan capabilities

- **Bulk Upload:** Available on Growth and Enterprise. Supported file size is up to 5,000 rows per CSV.
- **Standard:** Bulk Upload is not included.
- **Shipment status:** BOOKED means the shipment is created but ParcelPilot has not yet received a pickup confirmation. PICKED_UP means carrier pickup has been confirmed.

2. Current known issues

KI-208 - Bulk Upload failures on large CSVs

Opened: 10 August 2026

Status: Investigating

Some Growth and Enterprise customers experience intermittent failures on CSV uploads above approximately 3,000 rows, even though the supported product limit remains 5,000 rows. Workaround: split the upload into files below 3,000 rows. Individual shipment creation is unaffected.

KI-211 - SwiftShip pickup webhook delay

Opened: 12 August 2026

Status: Monitoring

SwiftShip pickup confirmation webhooks can arrive up to 20 minutes late. A parcel may physically be collected while ParcelPilot still shows BOOKED. Before telling a customer that a pickup did not occur, verify the carrier status or wait through the known delay window.

3. Resolved issue

KI-176 - Address validation: Resolved 18 July 2026. Do not use this resolved issue to explain new incidents unless evidence specifically matches it.
