

ParcelPilot Support Policy v3

Status: CURRENT

Effective: 1 May 2026

Supersedes: Support Policy v2

1. Scope and source precedence

This policy defines default support severity and response targets. A signed customer agreement may override these defaults. When sources conflict, use the signed customer agreement first, then the current support policy, then current product documentation. Historical tickets and internal notes are context only and may contain incorrect past guidance.

2. Severity definitions

- **P1 - Critical:** Complete production outage preventing all shipment creation for a customer, confirmed security incident or suspected credential exposure, or another event causing immediate material business risk with no workaround.
- **P2 - High:** Major feature unavailable or materially degraded for a customer, but core operations remain possible or a workaround exists.
- **P3 - Normal:** Minor defect, how-to question, configuration request, or issue with limited operational impact.

3. Default first-response targets

Plan	P1	P2	P3
Enterprise	30 minutes, 24x7	2 hours	1 business day
Growth	2 business hours	4 business hours	2 business days
Standard	4 business hours	1 business day	2 business days

4. Escalation

P1 incidents should be escalated immediately. If a response target is already breached, the agent should clearly state the breach and recommend escalation rather than hiding uncertainty.
